Throwing correctly is one of the hardest things to teach.

How many times have you told players to "get your elbow higher" when they throw? You can teach a proper starting position for the feet, arms and body. You can teach the end position of the follow through. You can move the player's arm and hand through the proper motion and trajectory. But, when the player initiates the motion alone, all the prior instructions go out the window along with patches of the coach's rapidly graying hair. Players learn by seeing, hearing and feeling. The ThrowMAX helps them to feel the proper arm position. This is one of the reasons I designed the

ThrowMAX arm brace.

Our ThrowMAX flexible arm brace is designed to keep players from using incorrect arm motions. It does not allow the elbow to bend beyond approximately 90 degrees. By not allowing the arm to bend much beyond 90 degrees, players will automatically compensate by raising their elbow to shoulder height or higher to throw the ball. This is good. This is the start of a mechanically correct over hand throw. The ThrowMAX brace also allows for a proper side arm motion.

ThrowMAX will help coaches teach players to throw the ball correctly. It will help parents teach their children to throw the ball correctly, and it will look like it is happening naturally. That is the beauty of the ThrowMAX arm brace, it works naturally. It will also help protect enthusiastic players from damaging their arms while playing the Great American Pastime.

Throwing a baseball correctly is difficult and requires tremendous muscle memory. It will also take a lot of practice with the ThrowMAX flexible arm brace before muscle memory kicks in. Use the ThrowMAX whenever a player plays baseball, whether it is while playing catch, practicing or during a game. The brace will not inhibit a proper throwing motion. It will only prevent poor mechanics from interfering with proper throwing.

Once the proper motion is achieved, accuracy will come with practice.

I know! I've been coaching Little League youth baseball and adult Jack and Jill teams for the past fifteen years. Hundreds and hundreds of hours have been spent working with players showing them how to throw mechanically correct. That's another reason why I invented the ThrowMAX Flexible arm brace. ThrowMAX will ease the frustration of player and coach, allowing them to get on with enjoying and playing good baseball.

Lets have many great seasons!
